Explore

Congratulations for making it this far. You are unstoppable. So far you have learned lots of concepts and also built several mini-projects. I believe those mini-projects have helped you to understand React very well. After this, you can work on a sole or group React project. You can also expand your skill by using different packages (classnames, lodash, react-helmet, recharts, etc.), implementing PWA, styled components and CSS libraries with React application. In addition, learn SEO, accessibility, responsiveness and browser compatibility. Explore more and increase your knowledge in the domain. Read the [React documentation](#). Now, you should feel confident enough about your React skill and you should also start applying for entry or junior software developer or front end developer positions. No one will tell you that you are ready for a job, so you should make yourself ready.

Exercises

Exercises: Level 1

1. Polish your GitHub and make your projects as clean as possible
2. Work on your portfolio

3. Create LinkedIn account if you don't have yet. If you have LinkedIn account make it as attractive as possible. It will give a high chance for potential recruiters and companies to know more about you. In addition, there are lots of materials and people who can be used as motivation on daily basis.
4. Follow the author on LinkedIn, Twitter or GitHub if he created impact on your life.
5. Become an ambassador of CodingForAll by supporting and advocating our causes.
6. Write about 30DaysOfReact on different platforms and create an opportunity for others to get a valuable skill.

Exercises: Level 2

Coming ...

🎉 CONGRATULATIONS ! 🎉
